

# 10" Tile Panel Molds

## 10" x 10" Etched Diamond Tile Panel Molds

### These paired molds feature:

- 10" x 10" etched diamond tiles with 1/4" simulated grout
- 3.25 x 7" tile border on three sides
- Trim flange on three sides

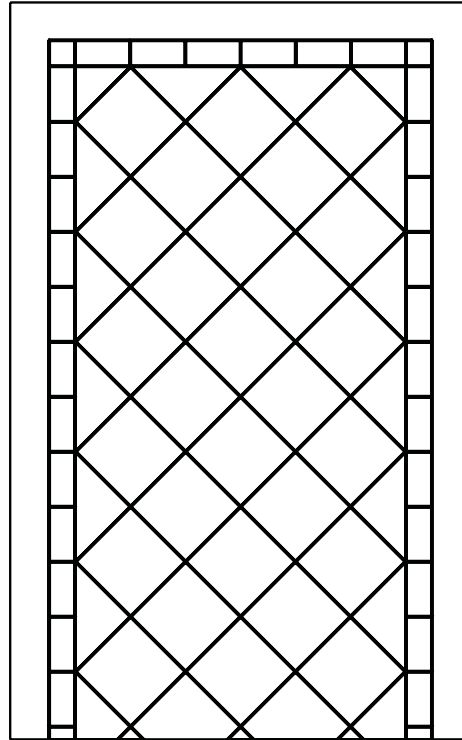

(See opposite side for dimensioned drawing)

### Applications:

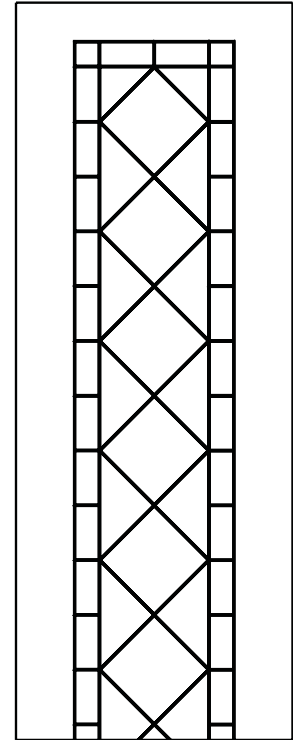

- Master or secondary bath
- Kitchen/dining areas, wet rooms, entries, hallways
- Residential or commercial
- Perfect for both new home construction or remodels

### Benefits:

- Etched for realistic tile look
- Tile look without the tile disadvantages
- Greatly reduces the chances of leakage often found in tile installations
- Extremely diverse range of materials, color, veined or textured treatment options
- Trim flange on three sides to simplify fitting of panels
- Large 60" x 96" back panel and complimentary two-cavity side panels for fast production

60 x 96" Back Panel  
#22896

36 x 96" Side Panels (2-Cavity Mold)  
#22779

**Create custom wall panels that mimic the look and feel of a tile installation - but without the water leakage associated with traditional tile and grout installations.**

These smooth tile and simulated grout wall panels are etched for a unique surface finish and realistic grout lines. These solid panels provide a key benefit compared to tile and grout - by dramatically reducing the potential for leakage, water damage, or mold often associated with tile and grout installations.

These panels are perfect for any location where tile might be found - the bathroom, shower/bath surrounds, bathroom walls, kitchen walls, commercial locations, and other areas - and are suitable for both new home or remodeling applications.

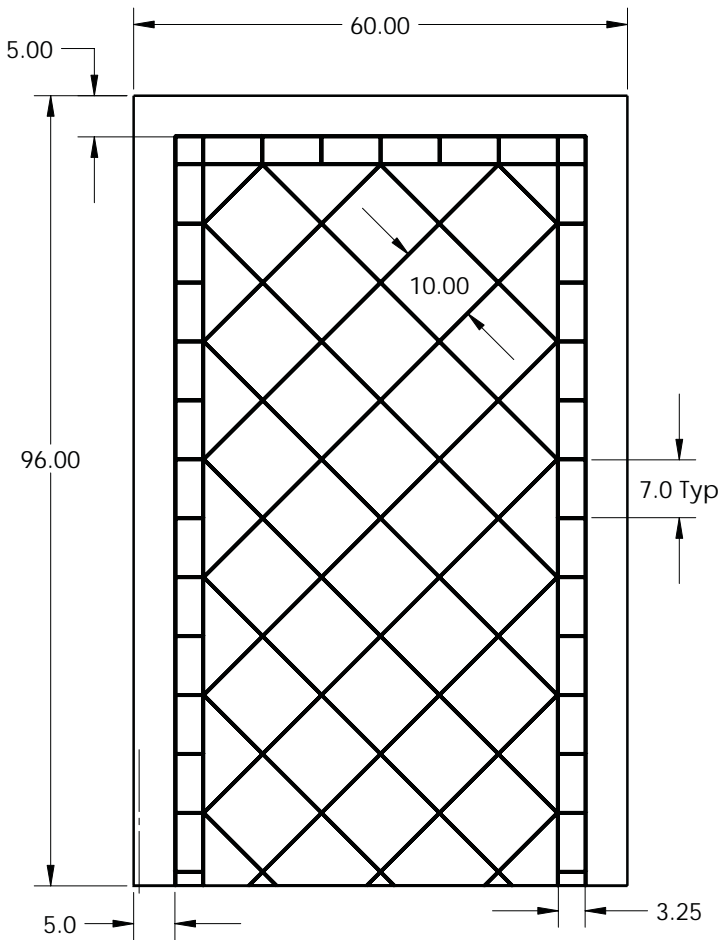

Add even more value by offering these panels in a variety of material or color options, or incorporate custom veining or texturing for a truly one of a kind product that will add distinction and value to any installation.

A flange surrounds the top and sides of these panels to simplify fitting of panels during installation without cutting into the tiles. The 36" wide side panel mold is offered as a two-cavity mold to shorten manufacturing time for a typical 3-wall bathroom shower or bath surround.
